

# Spading machine

## Type 32 S 120 L(H)

For all small 4-wheel tractors on the market with an engine capacity of between 15 and 25 HP (10-19 kW), Imants has the perfect spading machine in its range. The spading machine weighs 315 kg / 700 Lbs. with the rotary tiller and a mere 250 kg / 550 Lbs. without the rotary harrow, which is half the weight of a comparable machine from the FE/FP series. This spading machine works to a maximum depth of 35 cm. The spades on the spade axle are bent forward without the side twist.

These small spading machines are for use in conditions where speed is less important, but where the quality of the spading work counts, which is why a spade without a side twist has been chosen. The machine is available with or without a rotary tiller.

### Use

This spading machine is excellent for use in glasshouses in the narrow spaces between the posts, in tree nurseries, for market gardeners and horticulturists. This is also the ideal spading machine for contract work, such as in allotments.
